What to Expect During a New Patient Exam

Understanding what occurs during a new patient exam can alleviate anxiety and help you prepare. The process typically involves several key components:

Before any examination starts, the dentist or dental hygienist will ask you to complete a medical history questionnaire. This document is crucial as it provides insights into your overall health, including:

- Current medications
- Allergies
- Previous dental treatments
- Medical conditions (e.g., diabetes, heart disease)

It's important to be honest and thorough in your responses, as they can significantly impact your dental care.

2. Comprehensive Oral Examination

After reviewing your medical history, the dentist will conduct a thorough oral examination. This may include:

- Visual Inspection: The dentist will examine your teeth, gums, and mouth for any signs of decay, disease, or abnormalities.
- Periodontal Assessment: This involves measuring the depth of the pockets between your gums and teeth to assess gum health.
- Bite Evaluation: The dentist will check how your teeth align when you bite down.
- Oral Cancer Screening: The dentist may check for signs of oral cancer, which can include examining the lips, cheeks, and throat.

- Decay beneath the surface of the teeth
- Bone loss
- Abscesses
- Impacted teeth

The type and number of X-rays taken will depend on your dental history and current condition.

- Orthodontic assessments if alignment issues are present
