Interpreting AWS Exam Results

After taking the exam, understanding the results is essential for candidates. The AWS certifications utilize a scaled scoring system, which means that the passing score may vary depending on the exam's difficulty.

Exam Scoring

- Score Range: AWS exams typically have a score range of 100 to 1,000, with a passing score between 700 and 750, depending on the specific exam.
- Score Report: Candidates receive a score report that includes:
 - Overall score
 - Pass/Fail status
 - Performance in different domains (if applicable)

Understanding the Score Report

The score report is valuable for both successful and unsuccessful candidates:

- For Successful Candidates: It serves as a confirmation of their skills and knowledge, which can be showcased on resumes and professional networking sites.
- For Unsuccessful Candidates: The performance breakdown helps identify areas of weakness, enabling focused study efforts for future attempts.
